

# *International Conference:*

## **Ten Years after the Fukushima Daiichi Nuclear Accident –Impacts of Environmental Radioactivity and Advances in Radioecology (IERR)**

Soon — in 2021 — it will be 10 years after the Fukushima Daiichi Nuclear accident of March 2011. Time is approaching to reflect on lessons learned and progress made. Immediately after the accident there was a period of tremendous community stress and confusion over changing radiation protection standards. Now, a revitalization period is in progress through extensive remediation and a gradual reopening of formally restricted areas.

Since the accident, many scientific studies have been conducted in numerous research areas, especially on the topic of radiation in the environment. Thousands of scientific results have been disseminated internationally through a wide assortment of published manuscripts. In addition to scientific research, much effort has been made to restore communities and improve the quality of human life. Feedback from the science and community efforts are provided to residents to inform them about decreasing radiation levels and expected doses in the future.

The IERR conference will be held in June of 2021 to summarize knowledge obtained after the accident, and to recommend future directions for studies on environmental radioactivity. A published synopsis of the conference proceedings is planned.

***Place:*** Paruse Iizaka, Fukushima, Japan

***Date:*** June 22 (Tue)-26 (Sat), 2021

***Organized by:***

Fukushima University,  
Japan Atomic Energy Agency,  
National Agriculture and Food Research Organization,  
National Institute for Environmental Studies,  
National Institutes for Quantum and Radiological Science and Technology

***In co-operation with:***

Fukushima Prefecture

Contact: Hirofumi Tsukada (Institute of Environmental Radioactivity, Fukushima University)

E-mail: [hirot@ipc.fukushima-u.ac.jp](mailto:hirot@ipc.fukushima-u.ac.jp)

Website: <https://www.IERR2021.org/>

出展：原子力規制委員会ホームページ

## Scientific topics to be covered at the international conference include:

- Radionuclide transfer and speciation in terrestrial, marine and atmospheric environment
- Radiobiological effects on plants and animals
- Environmental and ecological effects of the accident
- Modelling approaches and environmental monitoring
- Decontamination, remediation and treatment of radiation areas
- Management of decreasing radiation and contamination of foods
- Differences and similarities of transfer parameters at Fukushima and Chernobyl
- Transfer parameters during accidental periods
- Chemical forms
- Radiation exposure and dose
