## Reaction of the Residents to Nuclear Related Policies : in a Risk Perception Perspective

5

가 , , DAD(Decide -  
Announce -Defend) .  
(acceptance)

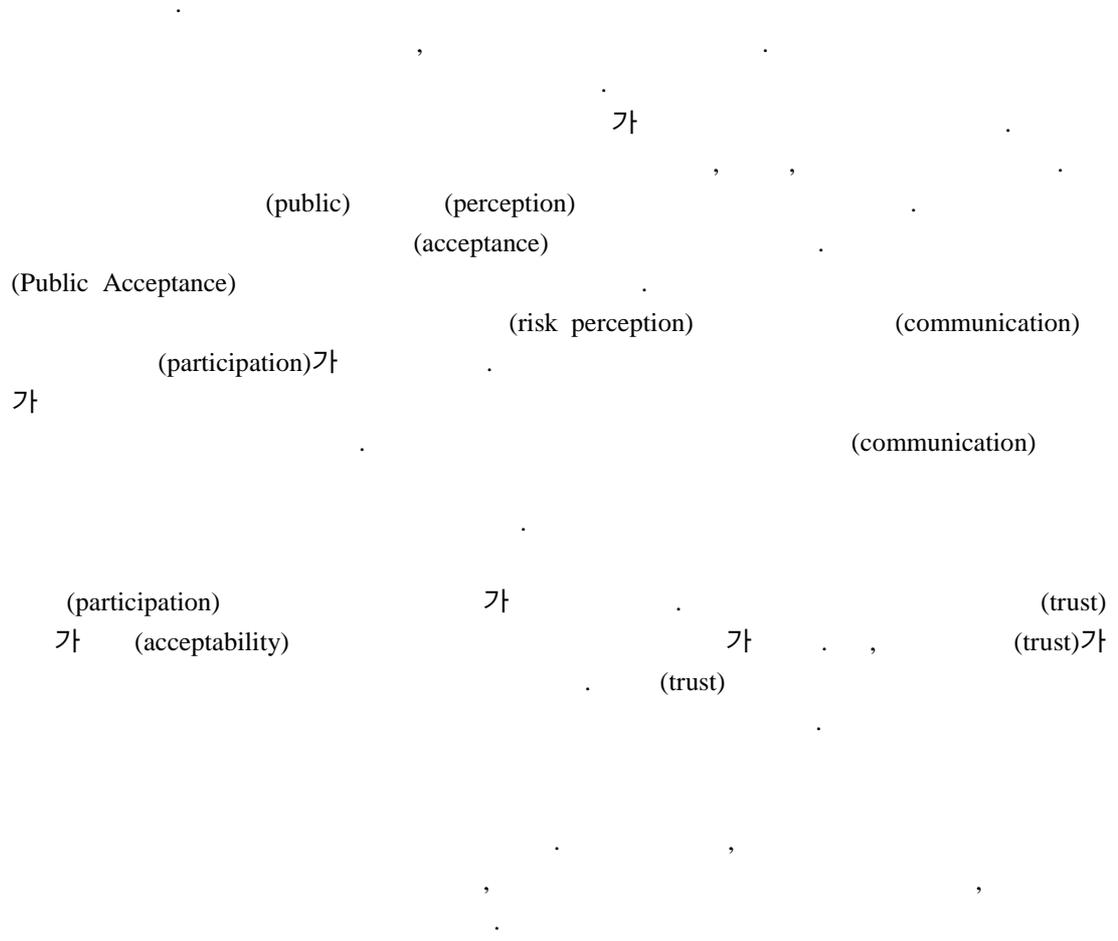

### Abstract

In general, most of the nuclear related policies are discussed at governmental level. Siting nuclear related facilities policies is the same as this. The government, as the single decision-maker, tends to decide all procedures from policy drafting, decision making to implementation. That is to say, the government has been opting for DAD(Decide-Announce-Defend) measure. This resulted in many forms of discord because the government overlooked the importance of sufficient communication with resident or the public. However, the precondition for promoting nuclear related policies is public acceptance. Meanwhile, the public including resident fully understand the necessity of nuclear facilities but do not agree with the idea of having them in their residential area.

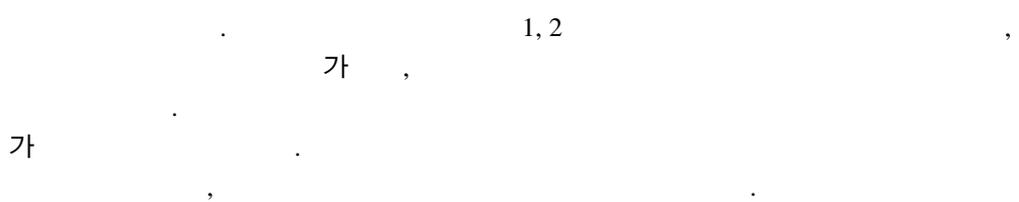

Therefore, the research focuses on identifying the affecting factors toward reaction of the resident derived from previous studies. It also aims to lay the foundation for devising effective communication strategies between the government and the public. The result of case study, it was found that these factors-trust, participation and compensation-have interacted to affect residents' reaction. Ultimately, the government must recognize the residents as decision-maker so as to gain the PA(Public Acceptance). It also necessary to create better decision making processes by substantial participation, reasonable compensation and trust are essential first steps toward improving the situation
